

ABSTRACT OF THE DISCLOSURE

(000801) The invention provides compositions comprising formula 1 steroids, e.g.,
16 α -bromo-3 β -hydroxy-5 α -androstan-17-one hemihydrate and one or more excipients,
5 typically wherein the composition comprises less than about 3% water. The
compositions are useful to make improved pharmaceutical formulations. The invention
also provides methods of intermittent dosing of steroid compounds such as analogs of
16 α -bromo-3 β -hydroxy-5 α -androstan-17-one and compositions useful in such dosing
regimens. The invention further provides compositions and methods to inhibit pathogen
10 (viral) replication, ameliorate symptoms associated with immune dysregulation and to
modulate immune responses in a subject using certain steroids and steroid analogs.
The invention also provides methods to make and use these immunomodulatory
compositions and formulations.
